

Figure 3. Phytoplankton group contributions (%) to total carbon biomass for surface waters (a) and integrated euphotic zone (b), and for integrated size fractionated Chl (c). PRO, SYN, PICO, NANO and CRYPTO. (c) size fractionated Chl (Poulton et al., 2022) for picoplankton (0.2-2 μm) and nanoplankton (2-20 μm) in the euphotic zone.
